pH Explanation

pH is a measure, on a scale from 0 - 14, of the acidity or alkalinity of a solution.
ACIDIC solutions have a pH less than 7 and ALKALINE solutions a pH greater than 7.
Toilet cleaning products are usually ACIDIC, as they are required to dissolve limescale.
Hard Surface Cleaners are usually ALKALINE.
Washing up liquids are usually NEUTRAL.
In general, cleaning products which are described as NEUTRAL are less likely to require a hazardous classification.

EVANS

EVANS VANODINE INTERNATIONAL

HOW TO CLEAN YOUR TOILET & URINAL

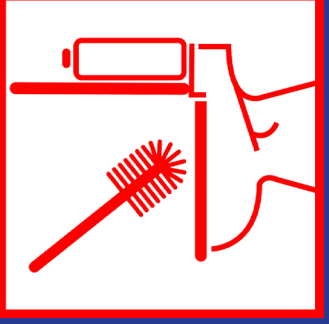

Flush toilet or urinal to remove any debris

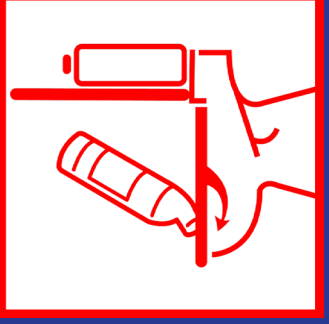

Place safety signs

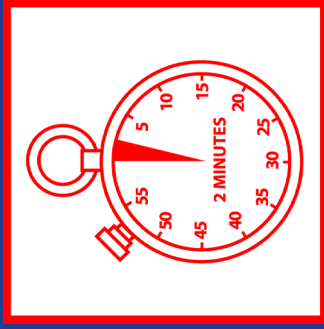

Wear appropriate personal protective equipment

Reduce water level with toilet brush.

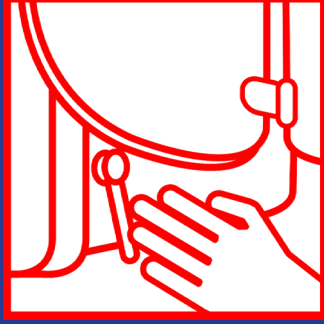

Direct nozzle under toilet or urinal rim and apply evenly over the surface.

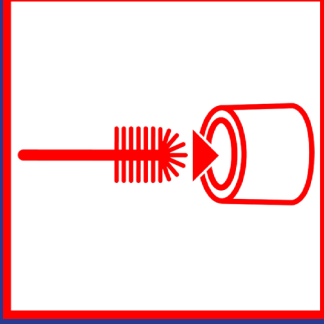

Leave for 2 minutes.

Brush around bowl or urinal - especially around rim and below water line.

Flush. Rinse brush.

Replace brush.

Remove safety signs & ensure chemicals are returned to the storeroom.
